

Minitube® Semen Straws

For over 25 years, the Minitube 0.25 ml and 0.5 ml semen straws have been used worldwide as a standard for the freezing of semen from bulls, stallions, boars, and many other species. Minitube's quality control process, production techniques, and material selection ensure a reliable product that consistently exceeds industry standards.

The EcoStraws and modified EcoStraws are advanced packaging options for specific applications. Both feature a plug with a shorter inner wick section that absorbs 3 – 4% fewer sperm cells than the corresponding symmetrical plugs of standard semen straws. The modified EcoStraw also features a plug position which slightly reduces the total filling volume.

EcoStraws are used in exactly the same way as standard semen straws:

- identical processes for filling,
- identical processes for sealing,
- identical processes for printing,
- identical processes for insemination.

EcoStraw Benefits

- Better utilization of available sperm cells per ejaculate because fewer sperm cells are lost in the plug
- Yield a larger number of semen straws per ejaculate
- Better use of valuable genetics without adding additional costs
